# HANELLY BY NAKISA

## Transform your HR data into valuable strategic information.

Hanelly is an intuitive organizational chart tool, supplied by NAKISA, which seamlessly integrates with your existing HCM suite (SAP HCM or SAP SuccessFactors). Hanelly stands out with a simple and elegant visualization of your current company situation. Data can be drawn from your core HCM solution and visualised in real time.

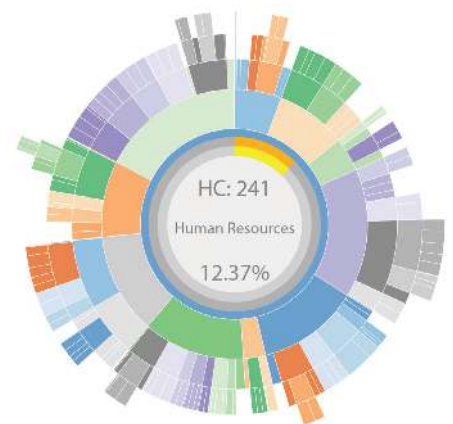

Additionally, Hanelly allows more than just a graphic record of your organizational chart. Multiple dashboards and reports offer different insights to analyse your data, such as visualization of personnel needs, discovering skill gaps, or assessing HR KPIs. Thereof goal and success oriented measurements can be derived to master business challenges.

With the integrated scenario builder Hanelly allows the generation and evaluation of possible scenarios, before taking action. The tool also supports collaboration of employees by sharing and reviewing scenarios. Once approved, scenarios can be easily integrated into the core HCM suite.

Especially for large structural changes, mergers & acquisitions, or combining multiple HCM suites, Hanelly helps to integrate, model and analyse data simply.

That way you can transform statistical data into tangible, visually prepared information, to assist you with critical decisions for your company and ensure long-term business success.

Thanks to years of experience and excellent consultants, HCM ADVICE is the ideal partner to implement and integrate Hanelly with your existing HCM suite.
